QUESTION: 71

What is a Lifecycle Project in CLM?

- A. a system representation of a software project
- B. a continuous process of managing the life of an application
- C. a set of project areas configured to enable cross-application traceability
- D. a special project deployed on the server to provide the online help

Answer: C

QUESTION: 72

Which important CLM themes are covered by the "Money that Matters" scenario?

- A. Realizing Use Cases and Transforming Diagrams to Code
- B. Aligning Release Plans and Automated Traceability Links
- C. Functional Test Plans and Automated Functional Testing
- D. Deployment Planning and Source Code Reviews

Answer: B

QUESTION: 73

During the development and test phase of a project, the team's process requires that the architect make a check of all changes made for a defect to ensure that the work is in-line with the solution design principals. Using the work items feature available with CLM, which three steps would assist in making this possible? (Choose three.)

- A. define a role of "Architect" and assign it to the appropriate users
- B. for the relevant transition in the work item lifecycle, add a precondition for a "Required approval" by the architect
- C. create a work item template containing the values that are applied when an architect has reviewed a work item
- D. add a new state for the work item called "Requiring Architecture Approval", where the lifecycle will pause until the architect approves
- E. insert a new Boolean field in all work items to indicate whether or not the work item has been checked by an architect

Answer: A, B, D

QUESTION: 74

A server license must be purchased for which CLM product?

- A. Rational Requirements Composer
- B. Rational Team Concert
- C. Rational Quality Manager
- D. None of the CLM products require customers to purchase a server license.

Answer: D

QUESTION: 75
