## C9550-606

*IBM WebSphere Business Modeler Advanced Edition V7.0,  
Business Analysis and Design*

<http://killexams.com/pass4sure/exam-detail/C9550-606>

- A. Open the "Widget" business item and remove the Parent template reference. Save the "Widget" business item to remove the error.
- B. Create a new business item template called "Widget Template" in the same project as the "Widget" business item. Save the "Widget" business item to remove the error.
- C. Create a new business item template called "Widget Template" in a separate project. Update the project reference group to include the project that "Widget Template." Save the "Widget" business item to remove the error.
- D. Create a new business item template called "Widget Template" in the same project as the "Widget" business item. Update the project reference group and remove the external project reference. Save the "Widget" business item to remove the error.

**Answer:** A

**QUESTION:** 103

Which of the following accurately describes the use of master and component projects as a modeling approach?

- A. Each modeler creates a component project that contains all of the master project elements.
- B. Each modeler creates a master project that contains common elements used across the component projects and models according to a component project template.
- C. The architect creates a master project that contains common elements used across the component projects as well as a template for using the component project.
- D. The architect uses a master project to assemble a component project that each modeler creates according to their individual preferences.

**Answer:** C

**QUESTION:** 104

A process analyst needs to model and simulate the following scenario in a business process: In a call center the manager of the department starts to take calls after all the operators are on the phone. How should the scenario be modeled to represent this behavior?

- A. Create operator and manager roles and then allocate them to the Take Call activity. Then simulate the process.
- B. Create operator and manager resources and then allocate them to the Take Call activity. Then simulate the process.
- C. Create an operator role and manager individual resource and then allocate them

to the Take Call activity. Then simulate the process.

D. Create operator and manager roles and additional business logic in the model to accomplish this scenario. Then simulate the process.

**Answer:** D

**QUESTION:** 105

In a credit card application process, there is a task to retrieve customer ID based on their information such as name, address and social security number. This task will be performed within many processes and its specifications are unlikely to change. Which of the following elements should be used to model this common task?

- A. Local task
- B. Human task
- C. Global task
- D. Receive task

**Answer:** C

**QUESTION:** 106

A process analyst at a bank needs to quickly set up and run a simulation for the current loan process. This is a high-level process that lacks details. There are no details available about the values of input and output data. The bank manager has provided statistics of 70% approval rate and 30% rejection rate for this process. What kind of decision and simulation should be applied?

- A. Simple decision with expression-based simulation.
- B. Simple decision with probability-based simulation.
- C. Multiple-choice decision with expression-based simulation.
- D. Multiple-choice inclusive decision with probability-based simulation.

**Answer:** B

**QUESTION:** 107

Which of the following measures would provide details about a single run of a process?

- A. Instance Metrics
- B. Aggregate Metrics

- C. Average Process Completion Duration
- D. Pre-defined Key Performance Indicators (KPIs)

**Answer:** A

**QUESTION:** 108

A travel agency uses an external service to make reservations. A message is sent from the travel agency to the external service, and a confirmation will be returned. In business designer, which of the following documents will show the boundaries and dependencies in this booking processes?

- A. Service document
- B. Process collaboration
- C. Process map
- D. Capability map

**Answer:** B

**QUESTION:** 109

A bank will offer a new service focused on increasing the capital invested in different types of bonds and increasing the customer base by 500 customers a month. Investments higher than \$500,000 will not be charged commissions. Identify which option describes the business measures and Key Performance Indicators (KPIs) that will enable process stakeholders to measure the success of this new offering.

- A. Total number of customers investing less than \$500,000 in the current month. Average amount of money invested in the current month.
- B. Total number of customers investing more than \$500,000 in the current month. Average amount of money invested in the current month.
- C. Total number of new customers that have invested in the current month. Total amount of money invested in the current month.
- D. Total number of new customers that have invested in the current month. Average amount of money invested in the current month.

**Answer:** C

**QUESTION:** 110

Refer to the Exhibit.

The process analyst needs to simulate the process with the following business attributes: Total number of customer information business item received for the process = 100 Business items arrived at a rate of 1 per minute. How should the inputs business items be modeled in the simulation profile?

- A. Set in the Profile Attribute - Input Tab the following:
  - Total number of tokens = 100
  - Time trigger: Time between bundle = 1 minute
- B. Set in the Profile Attribute - Input Tab the following:
  - Number of tokens per bundle = 100
  - Time trigger: Time between bundle = 1 minute
- C. Start from the process input instead of the start node. Set in the Profile Attribute - Input Tab the following:
  - Total number of tokens = 100
  - Time trigger: Time between bundle = 1 minute
- D. Start with the process input instead of the start node. Set in the Profile Attribute - Input Tab the following:
  - Number of tokens per bundle = 100
  - Time trigger: Time between bundle = 1 minute

**Answer:** C
