QUESTION: 110

While replacing a DPM, you did not save the configuration of the old DPM. During the setup of the replacement DPM you must setup the IP configuration, the IP address is 10.0.10.1, the network mask is 255.255.255.0 and the default gateway is 10.0.10.254. Which command will correctly configure the management interface of the DPM?

- A. "set interface MANAGEMENT ip 10.0.10.1 netmask 255.255.255.0 gateway 10.0.10.254"
- B. "modify eth MGMT ip 10.0.10.1 netmask 255.255.255.0 gateway 10.0.10.254"
- C. "modify eth MANAGEMENT ip 10.0.10.1 netmask 255.255.255.0 gateway 10.0.10.254"
- D. "set interface MGMT ip 10.10.10.1 netmask 255.255.255.0 gateway 10.0.10.254"

Answer: B

QUESTION: 111

Which software does the SVM subsystem require in a SAN environment on the host?

- A. Fabric software
- B. SAN agent
- C. multipathing software
- D. SVM agent

Answer: C

QUESTION: 112

How many PiTs per volume can be created?

- A. 8
- B. 16
- C. 24
- D. 32

Answer: D

QUESTION: 113

Which three statements are true about DPM groups? (Choose three.)

- A. A host can have volumes assigned from multiple DPM groups.

- B. A host can have views assigned from multiple DPM groups.
- C. A host can have thin volumes assigned only from one DPM group.
- D. A host can have synchronous multiMirror volumes assigned from multiple DPM groups.
- E. A host can have the same volume assigned from multiple DPM groups.

Answer: A, B, D

QUESTION: 114

What will happen if one of the SVM servers fail in the SVM domain?

- A. All volumes will failover to the other SVM servers.
- B. I/O data active path will fail to the other SVM server.
- C. All volumes will failover to the secondary DPM.
- D. Second SVM server will become the active SVM.

Answer: D

QUESTION: 115

Your customer needs to have a copy of data in three different data centers for testing and disaster recovery. Using multiMirror, which statement is correct?

- A. The customer would be required to use synchronous mirrors at all sites.
- B. This would require using the SVM's internal multi-site configuration.
- C. multiMirror provides a feature called "one-to-many mirroring".
- D. multiMirror cannot support three different mirrors.

Answer: C

QUESTION: 116

How does the LSI failover driver distinguish between one DPM group and another DPM group?

- A. by the DPM WWNN
- B. by the DPM group name
- C. by the DPM storage array unique identifier
- D. by the DPM WWPN

Answer: C

QUESTION: 117

Which two are included in the SVM Setup volume? (Choose two.)

- A. SVM event logs
- B. SaSnap logs
- C. SVM configuration database
- D. SVM replication database

Answer: A, C

QUESTION: 118

Where does the I/O packet first go from the host?

- A. the SVM
- B. the DPM
- C. the physical storage
- D. the SVM Agent

Answer: B

QUESTION: 119

What are two reasons for having a minimum of two DPMs in one SVM domain? (Choose two.)

- A. port load balancing
- B. port redundancy
- C. volume load balancing
- D. path redundancy

Answer: C, D
