Altiris Client Management Suite 7.1(R) Technical Assessment

QUESTION: 96

When manually creating an entry within the Software Catalog, the administrator needs the Managed Delivery policy to verify that prerequisite software is installed before deploying a new application. What should the administrator use to execute a prerequisite check?

- A. Detection Rule
- B. Applicability Rule
- C. Basic Inventory
- D. Software Filter

Answer: B

QUESTION: 97

An administrator receives notification of a new vulnerability threat from Symantec DeepSight Alert Services. The alert includes the name of an executable that should be prevented from running. Which policy should the administrator configure?

- A. Malware Blocking policy
- B. Application Metering policy
- C. Custom Inventory policy
- D. Software Inventory policy

Answer: A

QUESTION: 98

The IT Security department wants to prevent all versions of a particular file sharing application from running on company computers. Where must the software resource be defined before it can be prevented from running?

- A. Software Inventory scan
- B. Software Catalog
- C. Software Library
- D. Software Update policy

Answer: D

QUESTION: 99

An administrator is reviewing software resources in the software catalog. There is a duplicate for a software resource. The administrator has initiated the Resolve Duplicate Software Resources Wizard and selected the option to merge duplicate resources. What will happen to the duplicate entries in the Software Catalog?

- A. It creates a new software resource with the information from both entries and keeps the duplicates.
- B. It updates the original software resource with both unique identifiers and the duplicate is deleted.
- C. It creates a new software resource with the information from both entries and the entry with the newest timestamp is deleted.
- D. It updates the original software resources with the information from both entries and the entry with the oldest timestamp is deleted.

Answer: B

QUESTION: 100

A system administrator is testing the delivery of an application. During deployment, the administrator determines that the install path of an MSI needed to be changed without modifying the MSI. The administrator needs to change the command line parameters of the install package. Which policies would be affected when the default install command line of a software package is modified in the Software Catalog?

- A. policies that are assigned to a non-managed computer
- B. policies that leverage Software Discovery
- C. policies currently referencing the modified entry
- D. policies referencing staged software updates

Answer: C
